

Operational Management Policy

Uddeholm is the world's leading manufacturer of tool steel. We always strive to run our operation so that we minimize our environmental affliction, in a good working environment with a high safety level for our employees. For these reasons we manufacture our products of the highest quality and long service life, using recycled raw material while doing our utmost to prevent pollution.

Complying with laws, norms and other demands is a matter-of-course for us and we monitor that the demands are withhold. By preventive actions and continual improvements we will continue to preserve the quality of our products as well as of the environment we live and work in.

Our main areas of concern regarding influence on the environment are emissions into the air, noise, energy consumption and residuals. We minimize the environmental impact by working with improvement objectives within these areas.

The Operational Management System is an important tool for guiding our activities towards our goals, to continue developing our products and to set new objectives for quality, environment, working environment and safety. The system is reviewed by the management on a regular basis.

Our employees are our most important asset to fulfil demands and expectations from our customers, so that we excel as the best business partner today and in the future. Our employees are informed and trained about the management policy and its implications.

We communicate with other interested parties, achieving a good collaboration with the surrounding world, beneficial to both operations and environment.
